1. Team Introduction

Team Name: Respawn Studios

2. Team Lead

Name: Hamoud-Ur-Rehman

Roll Number: 23I-0607

Responsibilities:

The Team Lead is responsible for coordinating the project activities and ensuring timely completion of deliverables. They manage communication between the team and instructor, assign tasks based on team members' strengths, monitor sprint progress, and ensure that all documentation and implementation meet quality standards before submission.

3. Team Members

1) Abdullah Razzaq

Abdullah Razzaq is a sixth-semester BS Computer Science student at FST with a strong interest in game development and interactive technologies. He is a gaming enthusiast and passionate about UI design, particularly through creative “vibe coding.” He also enjoys video editing and aims to build a professional career in the gaming industry.

Github: *abdth3*

2) Hamoud-Ur-Rehman

With countless hours on Steam, Hamoud is a pure gaming enthusiast not only playing as a hobby but as a passion. My BSCS at FAST NUCES has allowed me to take it to the next level by coding games using C++, SFML etc and deploying working modules.

Github: *Hamoud-Ur-Rehman*

3) Muhammad Abdullah

Muhammad Abdullah is a third-year BCS student in 6th semester at FAST NUCES Islamabad. He has a strong foundation in C, C++, Java, Python and SQL, with a growing interest in Artificial Intelligence. He is motivated to build problem-solving skills through academic projects and is eager to gain industry experience.

4. Assigned Roles

For the PlayDB project, roles have been assigned based on individual strengths, technical expertise, and interest areas.

Scrum Master

Hamoud ur Rehman

Responsible for facilitating sprint planning, monitoring progress, removing obstacles, and ensuring Scrum practices are followed throughout the project.

Backend Developers

Hamoud ur Rehman
Muhammad Abdullah

Responsible for system architecture, database design, server-side logic, authentication, business logic implementation, and integration of core functionalities.

Frontend Developer / UI Designer

Abdullah Razzaq

Responsible for designing and implementing the user interface, improving user experience, and ensuring responsive and visually consistent layouts.

Testing & Quality Assurance

All Team Members

All members will collaboratively perform testing, including functional testing, UI testing, and bug fixing to ensure system reliability and performance.

Product Ownership

Since this is a semester-based academic project without an external client, product ownership responsibilities (feature prioritization and requirement decisions) will be collectively managed by the team.

5. Team Agreement

Communication Methods

The team will primarily communicate through **WhatsApp and Google Meet** for daily coordination and quick updates. Formal discussions and file sharing will be done via **Google Drive** and email when necessary.

Communication Response Times

Team members are expected to respond to messages within 2–4 hours during the day. Urgent matters should be acknowledged as soon as possible.

Meeting Attendance Policy

Weekly meetings will be held to review progress. Attendance is mandatory unless a valid reason is provided in advance.

Running Meetings

Meetings will be conducted either physically on campus or online via Google Meet. The Scrum Master will lead the meeting and summarize key decisions and action items.

Version Control Policy

GitHub will be used for version control. Only tested and meaningful changes will be committed. Clear commit messages must describe the changes made.

Division of Work

Work will be divided based on expertise and role assignments. Backend tasks will be handled primarily by backend developers, while frontend and UI tasks will be handled by the frontend developer. Testing will be shared among all members.

Submission Policy

All deliverables will be reviewed by the team before submission. The team will ensure final formatting and submit the document before the deadline.

Contingency Planning

If a team member is temporarily unable to complete assigned tasks, responsibilities will be redistributed among the remaining members to ensure progress continues. In case of repeated absence or lack of participation, the team will first discuss the issue internally and attempt to resolve it professionally. Task allocation may be adjusted based on commitment and availability to maintain project quality and meet deadlines.
